SUMMARY

Data scientist with a decade in ads measurement and advertiser growth analytics, including seven years at Google Ads. I build the systems that show sales and product leaders where advertiser demand is growing, which advertisers need attention, and whether a strategy caused the result. Recent work includes opportunity scoring across 200+ enterprise advertisers (+\$335M in 2025), causal measurement programs with Fortune 500 advertisers, and predictive LTV models. Trained as an experimental scientist at Princeton.

EXPERIENCE

Google | Principal Analytical Lead II, Head of Business Expansion, Google Ads | 2019 to Present
Previous roles: Principal Analytical Lead (2022 to 2025), Senior Analytical Lead (2019 to 2022). Rotations: AI Value Engineering, Cloud (2025); GTM Ads Lead, VCs and Startups, Brazil (2024); Growth Lead, CapitalG (2023).

Demand Growth and Advertiser Analytics

- **Demand Growth and Opportunity Scoring:** Founded Google's Business Expansion Center of Excellence, building a system that segmented 200+ enterprise advertisers by vertical, spend tier, and category penetration, sized untapped category demand, and scored expansion opportunities for sales prioritization. Scaled adoption to 200+ account managers through self-serve dashboards tracking pipeline and realized impact, driving +\$335M in incremental category revenue in 2025, on track for +\$600M in 2026.
- **Advertiser Benchmarks and Product Feedback Loop:** Partnered with PMs and engineers to build LLM-powered commercial analytics tools (CatalogAI, MarketPulse) that automated search taxonomy categorization, cutting analysis time from 6 to 8 hours to minutes. Converted seller feedback into 10+ prioritized feature changes, including peer benchmarking, and scaled usage globally to 50% of accounts.
- **Advertiser Value Modeling:** Measurement lead on 5+ predictive LTV deployments (Vimeo, Turo, Care.com, Contasimples, Alura) that shifted acquisition toward higher-value user cohorts. At Care.com, drove 92% more monetized traffic at 30% lower CPA, winning a Google-wide analytics showcase.

Experimentation and Causal Inference

- **Causal Measurement Program:** In 2026, led 10+ experiments with Fortune 500 advertisers at the VP+ level, including Indeed, LinkedIn, Progressive, Liberty Mutual, Oscar Health, Revolve, and L'Oreal, using synthetic controls, incrementality tests, and MMM calibration to measure the business impact of media and product strategies.
- **Google-wide Meta-Experiment:** Designed and ran a meta-experiment across 20 enterprise advertisers with a new framework for measuring Connected TV against performance KPIs. More than 60% of advertisers showed statistically significant lift in user-based incrementality studies.
- **GenAI Creative Experiment:** Co-led an early-access pilot using Gemini Enterprise to automate video ad creation, and designed a first-of-its-kind A/B experiment showing AI-generated video ads delivered ROI-positive performance versus standard creative. Published as a Google case study and used as an internal benchmark.
- **Experimentation Standards:** Trained LinkedIn's internal experimentation team on causal inference methods and MMM, setting Google-standard measurement practices across the business.

Growth Strategy and AI Value

- **Startup Growth, Brazil Rotation:** Built a scaled approach for VC portfolio companies, delivering 14 data and analytics workshops to 20+ startup C-levels that generated \$5.9M in Ads growth opportunities in 6 weeks.
- **AI ROI Modeling:** Built 3-year ROI and TCO models for enterprise Vertex AI deployments, showing up to 2.5x returns for a major sports league. Co-led an AI Innovation Lab for a private equity firm's portfolio companies, designing ad performance prediction and trend-spotting solutions estimated at up to \$53M in client value.

SELECTED BUILDS

- **TopTier LTV (toptierltv.com), Founder, 2026:** Built a holdout-measured marketing product for home-services businesses. Scores households at the parcel level from 4.29M public permit records across 11 markets to predict equipment-replacement timing, targets due households by mail, and measures lift against a pre-registered holdout (booked jobs per 1,000 households, confidence intervals, cost per booked job).
- **Stock Market Elephant (stockmarketelephant.com), Builder, 2026:** Built a quantitative research site with a trade-level Monte Carlo simulator for futures-trading outcomes and a backtesting series testing popular strategies across 1,900 historical sessions.

PRIOR EXPERIENCE

Jet.com (acquired by Walmart)

- **Product Manager, Growth Engineering, 2018 to 2019:** Owned the acquisition-tech product roadmap, launching features behind controlled tests to optimize user acquisition, LTV, and marketing-stack ROI.
- **Data Analyst, Marketing (Paid Search), 2017 to 2018:** Owned paid-search strategy and performance across the acquisition funnel, managing bidding, budget allocation, and auction performance.

Princeton University

- **Research Specialist, Neuroscience, 2015 to 2017:** Designed and ran controlled experiments and statistical analyses on decision-making under uncertainty.

SKILLS

- **Measurement and Causal Inference:** Incrementality and holdout testing, synthetic controls, MMM calibration, A/B and meta-experiment design, predictive LTV modeling, Monte Carlo simulation, segmentation and opportunity scoring, benchmarking, ROI/TCO modeling
- **Programming and Data:** Python, SQL, BigQuery and BigQuery ML, Looker, Google Apps Script, data modeling
- **AI and Cloud:** Vertex AI, Gemini Enterprise, GCP, LLM-powered analytics workflows, prompt engineering
- **Certifications and Enablement:** Google Generative AI Leader. Designed and delivered "AI Prompting for Data Analysis" training for Google's SDS DM&A organization and "AI for Marketing" training for clients.

EDUCATION

- **Princeton University**, Bachelor's in Neuroscience and Molecular Biology, 2015
- **New York University**, Graduate coursework in Computer Science, 2018 to 2021: Algorithms, Programming Languages, Operating Systems, Computer Networks. Completed the PAC bridge sequence (C, Java, assembly, UNIX).
- **The Wharton School, University of Pennsylvania**, Private Equity Certificate, 2026
